

IN THE SPECIFICATION:

Please amend the specification as follows:

Please replace the paragraph at Page 7, paragraph 2 with the following amended paragraph:

[0038] Protected content is exposed when being written into a display buffer for display and, while in the display buffer, it is protected using ~~applications~~ applicant's invention as described in U.S. Serial No. 09/397,331.

Please replace the paragraph at Page 12, paragraph 1 with the following amended paragraph:

[0055] Netscape Communicator determines how words of text are distributed into lines by means of a system function call GetTextExtent. As used in the present specification, the name "GetTextExtent" is a generic name used to denote one of several system functions to determine text layout, including inter alia the functions GetTextExtentPoint, GetTextExtentExPoint and GetTextExtentPoint32. The function GetTextExtent accepts a text string as input and determines its width, so that Communicator can decide how many words fit into a current line. For example, referring to FIG. 5A, GetTextExtent() is repeatedly called with text strings "Four," "Four score," "Four score and," "Four score and seven," etc., until it determines that the string "Four score and seven years ago our fathers brought forth on this continent, a new nation, conceived" fits in one line, but the string "Four score and seven years ago our fathers brought forth on this continent, a new nation, conceived in" overflows the line. Thus the line in view window 510 breaks after the word ~~"in."~~ "conceived."

Please replace the paragraph at Page 12, paragraph 2 with the following amended paragraph:

[0056] Similarly, in FIG. 5B view window 520 is narrower than view window 510, and using GetTextExtent() the browser determines that the string "Four score and seven years ago our fathers brought forth on this continent, a" ~~first fits~~ fits in one line, but the string "Four score and seven years ago our fathers brought forth on this continent, a new" overflows the line. Thus the line in view window 520 breaks after the word "a."
